Игра: Кой познава най-добре функциите на различните органи в човешкото тяло?

0:35

Lungs

Brain

Intestines

Kidneys

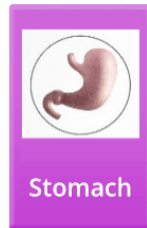

Heart

Liver

Produces bile which helps with digestion; filters the blood to eliminate harmful bacteria.

Stomach

Major sites of digestion.

Responsible for exchanging oxygen for carbon dioxide

Very strong muscle which helps pump you blood throughout your body

A site of digestion of the food we eat. After chewing the food travels down to it and, then, it goes into the intestines.

Controls everything you do, even when you're asleep

Filter the blood and produce urine.

Симулация на смилането на храната в стомаха

Как жлъчката, произведена от черния дроб, разгражда мазнините?

<i>Step No.</i>	<i>Description</i>	<i>Image</i>
<i>Step 1</i>	Pour milk into a dish. Put a drop of food colouring in different spots in the milk, far away from each other.	
<i>Step 2</i>	Squirt a little dish soap onto the cotton ball and then place it soapy side down in the dish. You will immediately notice the food colouring drops start to swirl around.
